

MEETING AGENDA

Meeting called by: — Nour Mokhtar — **Meeting type:** – discussion –

Date of meeting: 23/03/2022 10pm **Location:** ——— online ———

Meeting duration ————— 50 minutes —————

ATTENDEES

----- Nour Mokhtar (Moderator) -----
----- Maya Zahrouni (speaker) -----
----- Mohamed Hamza Allani (Devil advocate) -----
----- Rania Ben Traki (Technologist) -----
----- Omar Riahi (Note Keeper) -----
----- Amina Boujmil (Time keeper) -----
----- Ibtissem Ayedi (Technologist) -----

AGENDA HIGHLIGHTS

1. Meeting Launch

- Moderator (Nour): Officially launched the meeting at 10PM.

2. Meeting Objectives

- Align the team on project structure and responsibilities
- Define workflow for documentation and agent-based system
- Discuss audit/compliance logic (checklists, requirements, CAPA)
- Improve collaboration and integration across team members

3. Key Discussion Points

3.1 Team Organization & Collaboration

- Need to improve coordination between members
- Each member should:
 - Work on their part independently
 - Then integrate into a global system
- Avoid working in isolation without final integration

->DECISION:

- Adopt a modular approach + final integration phase

3.2 System Architecture (Agents)

- Discussion and debate about:
 - Agents (what each one does: their input , their process and output)
 - Communication between agents
 - Workflow/orchestration

- Idea: System should simulate interaction between agents instead of isolated tasks

->Decision:

- Focus presentation on:
 - Agent roles
 - Communication flow
 - System architecture

3.3 Task Distribution

- Need for clear task assignment
- Each member:
 - Responsible for a defined component
 - Must follow a checklist / requirements

->DECISION:

- Break the main objective into 2 groups :
 - Rania , Amina , Maya and Omar work on the internal audit specifications
 - Ibtissem , Hamza and Nour work on the ISO requirements and compliance part

3.4 Documentation & Requirements

- Emphasis on:
 - Understanding requirements (exigences)
 - Producing proper documentation
- Workflow discussed:
 - a.Start from checklist
 - b.Identify requirements
 - c.Produce documents
 - d.Validate compliance

->DECISION:

- Use a structured documentation flow
- Each output must be traceable to a requirement

3.5 Audit & Compliance Logic

- Introduced concepts:
 - Major / Minor / Critical issues
 - Corrective actions (CAPA)
- Roles:
 - CAPA Manager handles corrective actions
 - System classifies issues by severity

->DECISION

- Implement:
 - Issue classification system
 - CAPA workflow for corrections

3.6 Process Flow & Data Dependency

- Key insight:
 - Outputs depend on previous inputs
 - Processes are interconnected (chain logic)

->DECISION

- Design system as a linked pipeline
- Ensure data flow consistency between agents
-

3.7 KPIs & Performance Tracking

- Idea of measuring:
 - % of satisfied requirements
 - Compliance rate
- KPI should reflect:
 - Agent performance
 - Process efficiency

->DECISION

- Define KPIs for:
 - Requirement coverage
 - Issue resolution

4. Action Items

- the work is distributed between each grp and then for each member their tasks for next meeting

5. Next Meeting Agenda

Proposed Agenda:

1. Review progress on assigned tasks
2. Validate system architecture
3. Present agent communication model
4. Review documentation outputs
5. Evaluate KPI definitions
6. Discuss integration challenges
7. Define next step

6. Key Takeaways

- Integration is critical → not just individual work
- System must be:
 - Structured
 - Traceable
 - Interconnected
- Focus on:
 - Agents
 - Workflow
 - Compliance logic

7. Meeting Conclusion

- Nour Concluded the meeting at 11:26 PM. and confirmed that she would export the updated question file for further discussion with tutors the next day .
