

MEETING AGENDA

Meeting called by: — Nour Mokhtar — **Meeting type:** — Online —

Date of meeting: — 15/02/2026 — **Location:** — meet —

Meeting duration — 1h30 —

ATTENDEES

----- Maya zahrouni(**Note Keeper**) -----
----- Nour mokhtar(**Moderator**) -----
----- Rania Ben Traki(**Speaker**) -----
----- Mohamed Hamza Allani(**Devil advocate**) -----
----- Amina Boujmil(**technologist**) -----
----- Omar Riahi (**Time Keeper**) -----
----- Ibtisem Ayedi -----

DISCUSSION ON THE CRYPTO IDEA:

After meeting with Mr. Ahmed Tira, it was declared that cryptocurrency is not legal in Tunisia, and any transactions involving cryptocurrency must be declared to customs. Given this legal constraint, the team concluded that the idea of integrating cryptocurrency into our project is not feasible within the current legal framework. As a result, the team decided to abandon this idea and agreed to explore other alternatives.

BRAINSTORMING AND PRESENTATION OF NEW IDEAS

Following the decision to move away from the crypto idea, the team conducted a brainstorming session to generate new ideas. This session resulted in the presentation of five different concepts.

Hamza's Idea:

- Hamza presented his idea concerning the reduction of the population, which sparked some discussion. The team considered the idea but agreed to hold off on any immediate decisions. They expressed interest in further developing the concept before making any final decisions.

Omar and Ibtissem's Idea:

- Omar and Ibtissem presented an idea focused on Legal Consulting Services. They explained that a consulting firm had expressed a need for AI integration in their legal domain to improve efficiency and service delivery. The team showed appreciation for this idea, and it was agreed that they would wait for all team members to present their ideas before moving to a vote.

Maya's Idea:

- Maya introduced her idea for ArchAI (or TechStack Architect, StackSense, Architect Copilot), a system designed to help IT professionals make better technical choices early on in their projects. She explained that in IT projects, poor decisions about the technology stack, storage, deployment methods, and handling of large data can lead to a series of cascading problems: bugs, massive refactoring, infrastructure overspending, technical debt, delays, instability in production, and ultimately, non-scalable or insecure architecture.

Amina's Idea:

- Amina presented her idea for QualiPilot (or ISO Copilot, Quality Guardian), a solution designed to help companies maintain continuous compliance with quality standards such as ISO certifications. She outlined that many

organizations struggle with managing quality compliance because they rely on dispersed documents (like Word, Excel, and shared drives) with uncontrolled versions.

Rania's Idea:

- Rania presented an idea related to autism, which is still in the development phase. While the concept is intriguing, the team agreed to further explore this idea in more detail and consider its potential applications at a later stage.

Final Decision and Voting:

After all the ideas were presented, the team participated in a vote. Amina's idea, QualiPilot, which focuses on quality control and audit readiness, was unanimously chosen by the team. This idea was considered the most relevant and impactful, addressing real challenges in ensuring compliance and efficiency in organizations. As a result, the team decided to move forward with Amina's concept and began planning the next steps for its development.

Meeting Conclusion

The meeting concluded with a collective agreement on the selected project and the distribution of initial research tasks to move forward with the next phase.
