

MEETING AGENDA

Meeting called by: — Maya Zahrouni — **Meeting type:** — Remote —

Date of meeting: — 22/02/2026 — **Location:** — online —

Meeting duration — 1h —

ATTENDEES

----- Mohamed Hamza Allani(**Note Keeper**) -----
----- Maya Zahrouni(**Moderator**) -----
----- Rania Ben Traki(**Speaker**) -----
----- Nour Mokhtar(**Devil advocate**) -----
----- Amina Boujmil(**technologist**) -----
----- Omar Riahi (**Time Keeper**) -----

OBJECTIVE OF THE MEETING

The objective of this meeting was to align the team on the proposed solution, validate the global architecture, and clarify the roles, responsibilities, and conceptual vision of the project, particularly regarding the audit internal and ISO certification components.

CONTEXT

Following previous brainstorming sessions, the team held this meeting to review the proposed solution architecture, ensure a shared understanding of the system, and confirm the coherence between the different modules (Audit Interne and Certification ISO).

The discussion aimed to strengthen the conceptual foundations of the project before moving to implementation and documentation phases.

DISCUSSION OF PROJECT IDEA

Presentation of the Solution Architecture (Presented by Rania)

Rania presented the overall solution architecture, as detailed in the shared PDF document.

She explained the division of the system into two main modules:

- Internal Audit Module
- ISO Certification Module

She highlighted that the two modules can operate independently or in an interconnected manner, depending on the needs of the organization

Interaction Between Audit and ISO Modules (Raised by Hamza)

Hamza suggested that the agents of the Internal Audit module and the ISO Certification module should communicate and share information, particularly audit results, non-conformities, and corrective actions.

Rania confirmed that this interaction had already been considered in the design and agreed that it strengthens the system's coherence and usefulness.

Mind Map Clarification (Discussed by Nour)

Nour raised questions regarding the mind map, seeking clarification on how the project components are structured and connected.

After the discussion, she confirmed that she now has a clear vision of the global architecture and took responsibility for creating the project mind map.

State of the Art Review (Presented by Maya)

Maya presented the state of the art, introducing two similar existing applications in the domain of audit and ISO management.

She explained their limitations and clearly stated why our solution stands out, particularly in terms of modularity and agent-based design.

Maya also confirmed her agreement with Rania regarding the proposed processing pipeline.

Additional Mind Map Proposal (Suggested by Omar)

Omar suggested a possible structure for the mind map, proposing an alternative way to visualize the relationship between modules, agents, and processes.

His proposal was noted and will be considered during the mind map creation phase.

DECISIONS & NEXT STEPS

- Validate the two-module architecture (Audit Interne & Certification ISO)
- Confirm communication between modules
- Assign mind map creation to Nour
- Proceed with documentation and refinement of the architecture
- Continue developing the state of the art and differentiation aspects
